

DHARMATEJ VANAMAMALY

Karimnagar, Telangana, India | +91-63037 62247 | dharmatejvanamamaly@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

CAREER OBJECTIVE

Student of Computer Science Engineering [AI & ML], with experience in Python programming, full-stack development, REST APIs, database management. Developed and deployed AI-powered applications and MERN stack applications using TensorFlow, React, Node.js, MongoDB, and Docker technologies.

EDUCATION

Bachelor of Technology in Computer Science Engineering (AI & ML) SR University, Warangal, Telangana — CGPA: 8.7	<i>Pursuing</i>
Board of Intermediate Education (MPC) SR Junior College (TSBIE Board), Karimnagar, Telangana — CGPA: 8.2	<i>2023</i>
Secondary School Alfred Noble School, Keshavapatnam, Karimnagar, Telangana — CGPA: 9.6	<i>2021</i>

SKILLS

Data Structures & Algorithms: Arrays, Linked Lists, Trees, Graphs, Sorting, Searching, Recursion	Deployment & Cloud: Docker, Git/GitHub
AI / Machine Learning: Deep Learning, TensorFlow, Scikit-learn, Pandas, NumPy, Regression Modeling, Classification Modeling	Other Tools: Power BI, Excel, JSON
Languages: Python, SQL	Web & Databases: HTML, CSS3, MySQL, MongoDB, REST APIs

PROJECTS

AI Playlist Generator—Deep Q-Learning, TensorFlow, Python, Streamlit, Spotify API [Live] [GitHub]	<i>Dec 2025</i>
- Trained a DQN model on 10,000+ Spotify tracks for playlist recommendations. - Extracted and processed 15+ audio features for playlist classification. - Integrated 3 Spotify Web API endpoints for track search, audio feature extraction, and playlist creation. - Deployed the application using Streamlit, delivering real-time recommendations from a 10,000+ track catalog.	
Household Electricity Consumption Prediction, Python, Scikit-learn, ML Algorithms [Live] [GitHub]	<i>Jan 2024</i>
- Designed a machine-learning forecasting framework to predict residential electricity consumption using historical energy usage data. - Compared regression models using MAE, MSE, RMSE, and R². - Achieved 85% prediction accuracy using systematic preprocessing and model optimisation.	
MediHist—React.js, Node.js, Express.js, MongoDB, JWT, REST API [Live] [GitHub]	<i>Jul 2026</i>
- Built a MERN-based web application managing patient medical records across 3 core data categories, with secure user authentication. - Designed 8+ REST API endpoints supporting authentication and CRUD operations for patient history, prescriptions, and health records. - Implemented secure JWT-based authentication with role-based access control across all 8+ REST API endpoints, backed by MongoDB CRUD operations. - Published the frontend on Vercel and the backend on Render, enabling reliable cloud-based access to all 8+ API endpoints for end users.	

HACKATHONS & ACHIEVEMENTS

National Level Environmental Sustainability Exhibition,	<i>May 2025</i>
Represented SR University, presenting sustainability-focused project work.	
Smart India Hackathon (SIH)—National Finalist	<i>Mar 2024</i>
Govt. of India initiative; cleared multiple internal evaluation rounds to represent SR University at the national level.	
Hack With India Hackathon, CBIT—Selected, Level 3,	<i>Dec 2024</i>
Progressed through multiple elimination rounds in one of India's largest student hackathons.	
Accenture iAspire – Go for Gold	
Achieved Gold Level Award for continuous professional development and upskilling.	

CERTIFICATIONS

Microsoft Certified: Azure AI Fundamentals—Microsoft	<i>Feb 2025</i>
Python Full Stack Developer Virtual Internship—EduSkills	<i>Dec 2024</i>
